PROJECTS

HAUL'R – Permission based admin console for a trucking app

Created the web app and integrated with existing backend servers

- Collaborating with the team to deliver seamless and effective SCRUM development experience for team members.
- Innovating to improve existing assets and components and increase client satisfaction and retention.
- Solely responsible for developing the MERN stack app hosted on an AWS C2 Instance, version controlled with Git.
- Consistently remain flexible and delegate mentoring responsibilities to qualified team members when necessary in order to accommodate client needs

SOCIAL MEDIA APP – Sign up, follow users, make posts, customize your profile

Used different data fetching patterns, user authentication, and unique UX/UI

- Proficiency in JavaScript frameworks, ensuring that the app is developed with the best possible solutions.
- Leveraging extensive PostgreSQL knowledge to build confidence around data routing options.
- Using knowledge of AuthJS to deliver a trusted experience for users with GithubAPI and GoogleAPI.
- Maintained professional app structures and implemented best practices.

NOTE-TAKING APP - Take notes, review when they were made

PostgreSQL stores user input and fetches them on user dashboard

- Developed new data mapping strategies to improve user experience and optimal performance.
- Driving JavaScript knowledge to design React components and build a high performance experience.
- Skillfully incorporated paginated lists for the user to browse their results, FETCHing from the PostgreSQL database.

EDUCATION

University of Denver – 24 week Coding Bootcamp

JUNE 2020

Certificate of Completion

PERSONAL

- I like to integrate my hand-drawn art into my websites!
- My dog is my life and her name is Honeybee.
